TopCEM Dual Cure Resin Cement

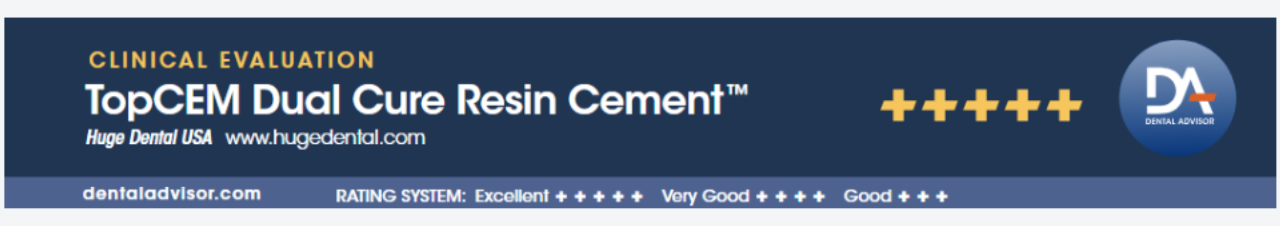

Your 5-Star Choice Awarded by Dental Advisor

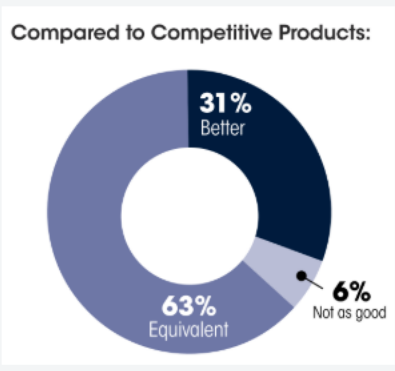

Choosing a resin cement means choosing confidence in every restoration. TopCEM Dual Cure Resin Cement (DCRC), our core luting material, has just received a **5-Star Excellent clinical rating** from **Dental Advisor**, following an independent evaluation involving 288 clinical trials. With a **96% favorable evaluator response**, TopCEM demonstrated strong clinical acceptance among dental professionals.

Designed for permanent cementation of crowns, bridges, inlays, onlays, veneers, root canal posts, and other restorations, TopCEM DCRC combines dual-cure capability with versatile clinical applications to support predictable cementation workflows.

5-Star Clinical Validation

94% of clinical evaluators rated **TopCEM equal to or better** than their current preferred resin cement.

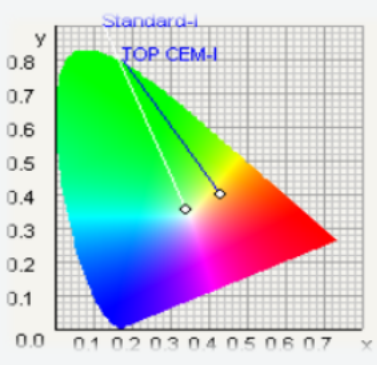

Hear what dentists say about **TopCEM:**

- "A great addition to my cementation protocol."
- "Great aesthetics, easy cleanup, and compatibility with many materials."
- "The flow of the material was great, and the option for different shades was ideal."
- "Great product! Cleanup is a cinch!"
- "A good, sound product with a lot more shades than most resin cements available today."

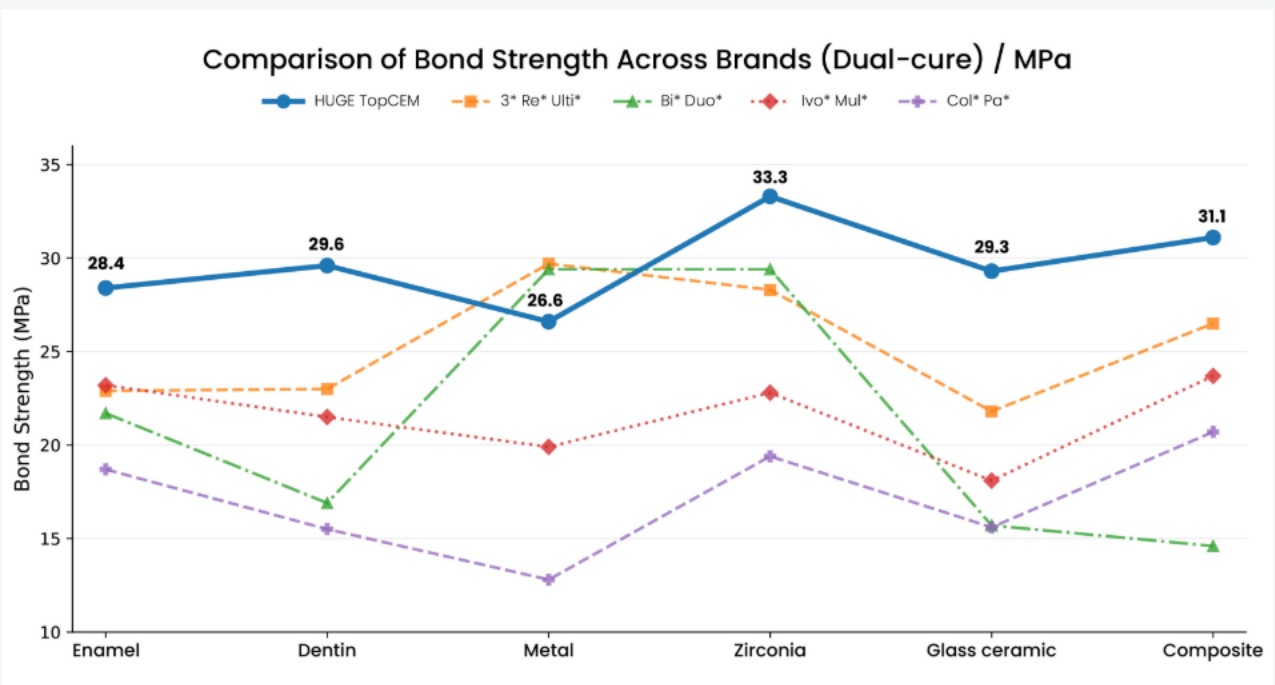

Core Competitive Advantages Powered by PTHP Tech

Backed by HUGE's exclusive PTHP redox self-stabilizing technology, TopCEM Dual Cure Resin Cement solves common pain points of traditional resin cements:

1. **Color Stability (△E≤1):** Virtually no color shift before and after polymerization, ensuring long-term aesthetic integrity.

2. **Amine-Free & Thermal Stability:** Overcomes thermal instability; remains stable for >13 weeks under 37°C/ 60°C accelerated conditions.
3. **Ultra-Low Film Thickness (13um) & High Strength (>120 MPa):** Ensures precise margin adaptation and structural durability.
4. **Superior Zirconia/Titanium Bonding**: Reaches 42 MPa initial bond strength, retaining >31 MPa after 5,000 thermal cycles and 130°C autoclave aging.

*Data from HUGE lab.

*Tested with respective manufacturer-recommended adhesives & primers.

Real Clinical Case

This case involves a root-canalled #21 with severely darkened tooth stump requiring crown restoration. It fully showcases TopCEM's core strengths: robust bonding performance and superior dark-shade masking. Our complete indirect cementation system delivers reliable adhesion while solving complex high-aesthetic clinical demands and satisfying the patient's cosmetic needs.
